

Endpoint Defender

Keeping endpoint systems up and running depends on keeping them free of viruses, spyware, and malware and up-to-date with software and operating system patches.

Viruses and malware threats are more pervasive than ever before. These viruses have the ability to replicate and spread to other computers or networked PCs. Viruses can cause damage to the computer's operating system and in some cases delete and encrypt (lock) files, overload resources and install rogue software.

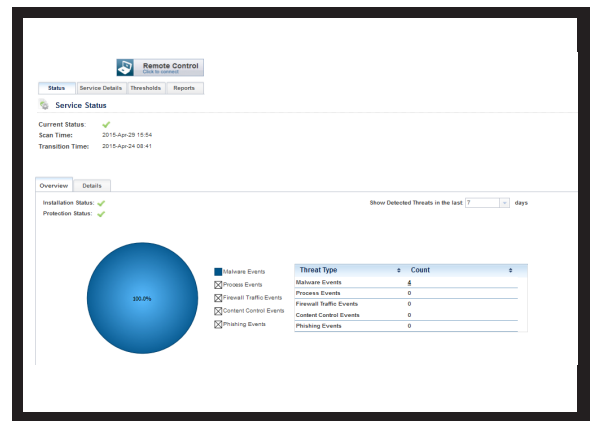

Protecting your computers and network systems requires antivirus and antimalware software that is proactive and can adapt with your environment.

Endpoint Defender from Systems Plus

Endpoint Defender is a managed antivirus platform that is dynamically updated and has minimal impact on your users' experience.

Endpoint Defender (powered by industry-leading Bitdefender with its proven security engine) delivers:

- antivirus and antispayware
- intrusion prevention
- streamlined deployment
- rule based system behavior blocking
- proactive detection
- rootkit detection

Endpoint Defender provides comprehensive protection for your computers and networked PCs. Providing more than just antimalware protection, it includes firewall, intrusion prevention, proactive detection, ant-phishing, web filtering, and user control.

Endpoint Defender is available through monthly subscription.

Other Tools and Services available:

Off-site Backup

A cloud-based backup that allows you to access your files from anyplace with an internet connection. Off-site backup is a safety net for environment-wide restoration in the event on-site backup is unusable.

Back-up Manager

Automatic, fast, reliable, and continuous backups to protect desktop, laptop and server data.

IT Commander

From a single pane of glass, IT Commander enables one IT person to manage and monitor multiple devices.

Full Service IT from Systems Plus

Full service IT monitors all of your technology systems 24/7 and provides alerts to prevent IT failures. You can focus on running your business knowing your technology is being monitored, updated and protected.

Full Service IT includes:

- **Proactive Technology Management** – patch, anti-spyware, and spam management, desktop optimization, remote backup
- **Network Administration** – end-point connection, switch and router configuration, bandwidth management
- **End-user Support** – onsite and online technical support for employees
- **IT Strategy Consulting** – Technology overview and summary that guides IT planning and budgeting
