

IT Commander

The automated IT management tool that works for you.

From a single pane of glass, IT Commander enables one IT person to manage and monitor multiple devices. IT Commander from Systems Plus fully automates your anti-virus, patch management, back up, device discovery, remote control, and reporting. Best practices are built-in and operations are tuned to your environment and requirements.

Maintained by Systems Plus on a secure network, you get the full benefit of reliable, extensible management capabilities without any hardware or application management overhead.

Proactive IT management

Continuous, reliable security, backup, patch management and other best practices, ensure performance and reduce downtime.

Support for strategic decision making

IT Commander reporting delivers the current, accurate, detailed information you need to make sound decisions about your computing environment.

Increased control, decreased overhead

IT Commander enables IT professionals to take proactive command of their network.

Best practices

IT Commander implements essential management standards across your environment.

Systems Plus support

Experienced engineers will help you customize IT Commander and solve issues.

The IT Commander Tools:

Endpoint Defender

Protect end-points from debilitating viruses without impacting performance. With no renewal dates to miss, protection never stops.

Back-up Manager

Follow an initial full-image back-up with regularly scheduled incremental backups of servers and end-user computers to support full and fast data restoration. IT Commander can fully manage backup operations or work alongside other solutions.

Patch Manager

Roll out patches to selected end-points or your entire managed environment – or remove patches and rollback to a previous installation - with the click of a button. Deployment is carefully tracked to keep you up-to-date on successful patches and configurations that require attention.

Report Manager

Collect device-specific details including make, model, memory, CPU speed, hard drive capacity, operating system, installed applications, installed patches, network adapters, BIOS, warranty and lease information at scheduled intervals.

Remote Control Manager

Take secure control of end-points to support users or tend to IT Commander alerts and notifications. Sessions can be end-user requested or conducted on unattended, but connected, devices.

Find out how IT Commander can work for you.
